HONG KONG Women in Figures 2019

Women's Commission
Preface

Since its establishment in 2001 as a central mechanism to promote the well-being and interests of women in Hong Kong, the Women’s Commission has advocated gender mainstreaming as a key strategy in achieving gender equality. Gender mainstreaming is the integration of gender perspectives and needs in legislation, policies or programmes, in any area and at all levels. So we have to collect and analyse sex-disaggregated statistics systematically and scientifically when analysing the current situation in order to achieve gender mainstreaming.

To this end, the Commission takes great pleasure in presenting the 2019 Edition of “Hong Kong Women in Figures” which highlights key statistics of women and men in Hong Kong. The present position and trends of women’s development in Hong Kong are also exhibited.

As the seventh publication in the series since 2007, this booklet continues to provide the public with a handy yet comprehensive reference to the progress and development of Hong Kong women. Data collected is displayed in an evident and conspicuous manner over the following ten areas:

- Population
- Marriage and Family
- Education
- Employment
- Health
- Social and Political Participation
- Social Security and Welfare
- Violence and Crime
- Information Technology Usage
- International Comparison

Gender disaggregated data is essential to develop gender sensitive policy and enable effective monitoring and evaluation of change for women. The Commission hopes that you will find this booklet a useful instrument for women's studies or research, as well as an effective starting point for interested parties to gain a deeper understanding of the situation of women in Hong Kong. The Commission also hopes it will stimulate reflection and discussion on women-related issues in the community.

Population

In 2019, the mid-year population of Hong Kong was 7,524,100, of that 4,091,400 were female. Over the past decade, there have been substantial changes in the population composition of Hong Kong in terms of number, gender and age. Some of the noticeable changes are the ageing population and the continuous decrease in sex ratio (number of males per 1,000 females).
1.1 Population Pyramids

Comparison between the population pyramids in 2009 and 2019 shows a continuing ageing trend during the period. There were generally more women than men in the age groups of 20 – 74 and 80 and over in 2019.

1.2 Sex Ratios

The ratio of male to female decreased continuously over the past decade. This arose as a result of the large inflow of female one-way permit holders from Mainland China and the importation of a large number of female foreign domestic helpers.
Among the one-way permit holders entering Hong Kong from Mainland China, the number of women exceeded that of men, as many women came to Hong Kong to join their husbands.

1.4 Foreign Domestic Helpers(1) by Sex

Notes:  
(2) Figures include persons living with spouse and/or child(ren), regardless of whether they are living with parent(s) or not.  
(3) Figures include persons living with person(s) other than parent(s), spouse and child(ren).  

Source: Census and Statistics Department

There were changes in the living arrangement of women and men during 1996 – 2016. In particular, the proportion of women living alone increased steadily from 3.3% in 1996 to 6.3% in 2016, while that of men experienced a slight increase from 5.5% in 1996 to 6.6% in 2016.
The poor population of females were generally higher than those of males, mainly because more females (especially those who were older and retired) resided in economically inactive households with no employment earnings.
Marriage and Family

Changes in the marital status and family conditions of people in Hong Kong over the past decade have brought about considerable changes in the role of female in the sphere of family life. The median age at first marriage of women and the proportion of Hong Kong females marrying males from the Mainland China among cross boundary marriages have risen steadily.
In both 2008 and 2018, the number of widowed / divorced / separated women was larger than that of their male counterparts. This can partly be explained by the longer life span of women and the relatively higher remarriage rate of the divorced / separated men.

The number of widowed / divorced / separated women increased over the past decade.
2.1.3 Median Age at First Marriage by Sex

The increase in the median age at first marriage for both women and men indicated a trend of late marriage.

2.1.4 Crude Marriage Rates by Sex

The crude marriage rates (i.e. the number of marriages per 1,000 population) for both men and women were generally decreasing since 2012, though there was a mild increase in 2014 and 2017.
2.1.5 Number of Marriages by Type

The number of remarriages of either or both parties constituted 35.5% of all marriages in 2018.

Note: (1) Figures refer to re-registration of couples who had customarily married in Hong Kong before 7 October 1971.

Source: Census and Statistics Department

The number of remarriages of either or both parties constituted 35.5% of all marriages in 2018.
2.1.6 Number of Cross-boundary Marriages between Hong Kong and Mainland China

The proportion of Hong Kong females marrying males from the Mainland China among cross boundary marriages has risen steadily over the past decade.

Notes: (1) Before the reference year of 2010, the figures of bridegrooms / brides from Mainland China are estimated with reference to two data items in the individual registered marriage records provided by the Immigration Department on a monthly basis, viz. “place of previous residence” being in Mainland China and “duration of stay in Hong Kong” being less than 1 year. The figure thus compiled might have included one-way permit holders entering Hong Kong and getting married in less than 1 year. Nevertheless, it still provides a good proxy indicator to cross-boundary marriage statistics. Since the reference year of 2010, besides the above two data items, more information (e.g. holding of travel document type) is used to enhance the estimates of bridegrooms / brides from Mainland China.

(2) Since applicants with issuance of CAMR (claimed for the purpose of marrying in Mainland China) may not eventually lead to marriages, the figures only serve as a proxy indicator to cross-boundary marriage statistics.

Source: Census and Statistics Department
2.1.7 Crude Divorce Rates

The crude divorce rates (i.e. the number of divorces per 1,000 population) bounced in 2017 and 2018 after the drop in 2014 - 2016.

Source: Census and Statistics Department

2.1.8 Single Parents\(^{(1)}\) by Sex

The number of single mothers outnumbered single fathers in the past two decades.

Note: (1) Refers to mothers or fathers who are never married, widowed, divorced or separated, and living with child(ren) aged under 18 in the same household. Figures for 2001-2016 have been compiled based on the classification of single parents adopted in the 2011 Population Census and the 2016 Population By-census.

Source: Census and Statistics Department
## 2.2 Family and Childbirth

### 2.2.1 Age Specific Fertility Rates

In 2017 and 2018, the fertility rates for women 35 – 39 were higher than those for women aged 25 – 29.

### 2.2.2 Median Age of Women at First Childbirth

The median age of women at first childbirth rose steadily during 2008 to 2018.

*Source: Census and Statistics Department*

### 2.2.3 Trend of Population, Women Aged 15 – 49 and Population Aged 0 - 14

The young population aged from 0 to 14 has experienced a decreasing trend since 1970s. The number of women aged 15 – 49 has remained stable since late 1990s, and the general population growth is forecasted to drop from 2040s.

*Source: Census and Statistics Department*
The headship rate is the ratio of the number of household heads in a given age-sex group to the total number of persons in the corresponding age-sex group of the population living in domestic households. The headship rates for female aged 50 and over increased from 2006 to 2016.
Education

The educational attainment of the Hong Kong population has improved much with the advancement in the Hong Kong society on different fronts. A wide range of education and training opportunities are available to all who wish to further their study and enhance their employability. The proportion of female aged 15 and over who have received post-secondary education and above has increased from 22.9% in 2008 to 30.5% in 2018.
3.1 Population Aged 15 and over\(^{(1)}\) by Sex and Educational Attainment

Among women aged 15 and over, 79.3% received secondary education and above as against 85.5% for men in 2018. The numbers of women and men who have received secondary education and above in 2018 increased by 21.7% and 11.7% respectively as against 2008.

Notes:  
(1) Including land-based non-institutional population aged 15 and over only.  
(2) Including Secondary 1-3 in all educational institutions.  
(3) Including Secondary 4-7 of old academic structure, Secondary 4-6 of new academic structure or equivalent in all educational institutions, Project Yi Jin / Yi Jin Diploma and craft level.  
(4) Including Certificate, Diploma, Higher Certificate, Higher Diploma, Professional Diploma, Associate Degree, Pre-Associate Degree, Endorsement Certificate, Associateship and other non-degree courses in local or non-local institutions.

Notes:  
(1) Figures in brackets denote the percentage shares of female and male students in each level of study of the respective academic years.  
(2) Since 2004/05 academic year, UGC-funded sub-degree and taught postgraduate programmes have generally been converted to the self-financing mode, thus leading to a continual decrease in the number of students reported for these two levels over the years.

Source: University Grants Committee
In the 2018/19 academic year, more female students enrolled in education (73.8%), arts and humanities (71.2%), health (65.7%), dentistry (64.3%), social sciences (64.0%), business and management (58.3%) and medicine (51.4%) programmes compared with male students.

In the 2018/19 academic year, there were 20,813 full-time staff with salaries wholly funded by UGC from General Funds in UGC-funded Institutions and 10,813 of them were female (52.0%). Female staff accounted for 18.8% of senior academic positions and 33.0% of junior academic staff. On the other hand, more non-academic positions were filled by women (62.2%).
Employment

With improvement in the level of educational attainment and increase in training opportunities, women in Hong Kong have increasing participation in economic activities and enjoy financial independence.

The labour force participation rate of women aged 40 and above increased remarkably in the past decade. The numbers of female certified public accountants outnumbered that of males in 2018.
4.1 Labour Force Participation

4.1.1 Labour Force Participation Rates (Excluding Foreign Domestic Helpers) by Sex

The labour force participation rate for women increased gradually from 49.7% in 2008 to 50.8% in 2018. On the other hand, the labour force participation rate of men decreased from 69.7% in 2006 to 68.5% in 2018.

4.1.2 Labour Force Participation Rates (Excluding Foreign Domestic Helpers) by Sex and Age Group, 2018

The labour force participation rate of women was lower than that of men in all age groups in 2018 except the age group of 15 - 19.
4.1.3 Labour Force Participation Rates (Excluding Foreign Domestic Helpers) by Educational Attainment and Sex, 2018

Generally speaking, the labour force participation rates of both women and men with higher level of educational attainment were higher.

Notes: (1) Including Secondary 1-3 in all educational institutions.
(2) Including Secondary 4-7 of old academic structure, Secondary 4-6 of new academic structure or equivalent in all educational institutions, Project Yi Jin / Yi Jin Diploma and craft level.
(3) Including Certificate, Diploma, Higher Certificate, Higher Diploma, Professional Diploma, Associate Degree, Pre-Associate Degree, Endorsement Certificate, Associateship and other non-degree level courses in local or non-local institutions.

Notes: (1) Based on HSIC Version 2.0. Figures for other industries are not released due to large sampling error.
(2) Accommodation services cover hotels, guesthouses, boarding houses and other establishments providing short term accommodation.
(3) The retail, accommodation and food services industries as a whole is generally referred to as the consumption- and tourism-related segment.

Source: Census and Statistics Department

Among various sectors, the proportions of the unemployed women were higher for those who previously engaged in the public administration, social and personal services sector, retail, accommodation and food services sector, and import/export trade and wholesale sector.
The number of unemployed females was consistently smaller than that of males. The unemployment rates of females in all age groups were lower than those of males except the age group of 30 – 39 in 2018.

Source: Census and Statistics Department
4.3.5 Part-time Employees by Sex

The number of female part-time employees had always been higher than their male counterparts, with the sex ratio of 553 males per 1,000 females in 2009.

4.3.6 Percentage Shares of Part-time Employees by Sex and Main Reason for not Working Longer Hours, April to June 2009

Took care of housework / took care of children, older persons, disabled or sick members at home was the major reason for female part-time employees not working longer hours. As for males, the major reason was slack work in company.
4.3.7 Self-employed Persons by Sex

The number of self-employed females was smaller than that of males, though there was a rising trend in the past decade.

4.3.8 Full-time Home-makers by Sex

Majority of full-time home-makers were females.
Among 2,527,400 economically inactive persons in 2018, 1,606,000 (63.5%) were females and 921,400 (36.5%) were males. The percentage of women citing "Engagement in household duties" as the reason for being economically inactive largely outnumbered that of men.

Source: Census and Statistics Department
Health

With better provision of medical services and greater health consciousness of the general public, people in Hong Kong are now living longer than before. The expectation of life at birth for women is among the highest in the world.
### 5.1 Expectation of Life at Birth by Sex

Comparing 2008 and 2018, the expectation of life at birth for women and men increased by 2.2 and 2.9 years respectively, indicating an improvement in the health conditions of the population over the past decade.

### 5.2 Infant Mortality Rates by Sex

The infant mortality rates for males and females have been constantly low in recent years.
5.3 Registered Deaths by Major Cause of Death and Sex

Note: (1) Classification of diseases and causes of death is based on the International Statistical Classification of Diseases and Related Health Problems (ICD) 10th Revision.

Source: Department of Health

5.4 Age-standardised Death Rates(1) of Ten Leading Causes of Death by Sex, 2018

(2) According to the ICD 10th Revision, when the morbid condition is classifiable under Chapter XIX as "Injury, poisoning and certain other consequences of external causes", the codes under Chapter XX for "External causes of morbidity and mortality" should be used as the primary cause of death.

Source: Census and Statistics Department, Department of Health

Death caused by malignant neoplasms (cancers) remained the major cause of death for both women and men, followed by pneumonia.
Among the top ten most common cancers in 2017, breast cancer was recorded as the leading cancer, followed by colorectum and lung cancer for women. For men, colorectum cancer was the leading cancer which was followed by lung and prostate cancer.

The total number of disabled women aged 60 and over was significantly greater than that of men in 2013.
In 2017, of the 615 000 daily cigarette smokers, the total number of female smokers was smaller than that of male smokers.

The number of reported male and female drug abusers dropped from 2008 to 2018.
There were more reported HIV and AIDS cases among males than females in the past decade.
5.10 Persons who Reported to Have Osteoporosis by Sex

The number and percentage of females who reported to have osteoporosis were larger than those of males.

**Note:** Figures in brackets refer to the percentage of persons who reported to have Osteoporosis to all persons in the respective sex group and survey period.

**Source:** Census and Statistics Department

5.11 Body Mass Index (BMI) Distribution Based on Classification of Weight Status for Chinese Adults in Hong Kong by Sex, 2016

The proportion of females who were overweight or obese (30.5%) was smaller than that of males (48.2%).

**Source:** Department of Health
Social and Political Participation

Over the years, women have become more active in participating in public affairs and in exercising their civil rights. Although the absolute number of women holding public posts is still comparatively smaller than that of men, figures reflect a comparable size of registered electors and voter turnout of women as compared with men.

  - Female: 911.7
  - Male: 927.1
- **Registered Electors:**
  - Female: 1,925.1
  - Male: 854.0
- **Voter Turnout:**
  - Female: 1,103.9
  - Male: 1,098.3

*Source: Registration and Electoral Office*

The number of registered female electors and voter turnout increased from 2008 to 2016. Similar situation was observed for males.

### 6.4 Elected Members and Government Appointed Members\(^{(1)}\) in District Councils\(^{(2)}\) by Sex

![Bar chart showing number of elected members and government appointed members by sex from 1999 to 2019.](image)

- **Female Elected Members:**
  - 1999: 87
  - 2003: 83
  - 2007: 85
  - 2011: 85
  - 2015: 27
  - 2019: 25

- **Male Elected Members:**
  - 1999: 333
  - 2003: 329
  - 2007: 327
  - 2011: 333
  - 2015: 352
  - 2019: 364

- **Female Appointed Members:**
  - 1999: 15
  - 2003: 19
  - 2007: 17
  - 2011: 10
  - 2015: 79
  - 2019: 88

- **Male Appointed Members:**
  - 1999: 57
  - 2003: 71
  - 2007: 78
  - 2011: 79
  - 2015: 79
  - 2019: 88

*Notes: (1) Government appointed members include ex-officio members.
(2) Figures refer to the position right after District Council Ordinary Elections.
By-election figures are not included.*

*Source: Home Affairs Department*

The number of females elected to the District Councils has increased over the years, though the proportion of women members was still low.
6.5 Percentage Shares of Male and Female Civil Servants (1) (2) (3)

The percentage share of female civil servants increased gradually from 34.3% in 2008 to 37.8% in 2018.

Notes: (1) Figures as at end of each reference year. Figures in brackets are the number of civil servants in thousands.
(2) Civil servants refer to persons who are employed on civil terms of appointment as at the survey reference date.
(3) Figures exclude judges and judicial officers in the Judiciary, Independent Commission Against Corruption officers, locally engaged staff working in the Hong Kong Economic and Trade Offices outside Hong Kong, and other government employees like Non-Civil Service Contract staff.

Source: Civil Service Bureau
The number of female directorate officers in the civil service increased significantly by 38.4% from 380 in 2008 to 526 in 2018.
The percentage of female serving on government advisory and statutory bodies increased from 27.6% in 2008 to 33.2% in 2018.
6.8 Registered Volunteers of the Volunteer Movement\(^{(1)}\)\(^{(2)}\) by Sex

The number of female registered volunteers was consistently greater than that of male, which constituted 59% of the total number of registered volunteers.

Notes: (1) Volunteer Movement is a central office for volunteer service within the Social Welfare Department to develop volunteer service in a more coordinated manner. A computer database to capture information on individual and corporate volunteers was established to facilitate volunteer development.

(2) Figures as at end of each reference year.

Source: Volunteer Movement
Social Security and Welfare

The Government provides different forms of support to members of the community who are in need of financial or material assistance to address their basic needs through a non-contributory social security system. The number of women receiving various types of assistance is in general more than that of men.
The number of female CSSA recipients was in general greater than that of male recipients. The number of both male and female CSSA recipients dropped steadily since 2009.
7.2 Recipients of CSSA\(^{(1)}\) by Type of Case\(^{(2)}\) and Sex, 2018

![Bar chart showing recipients of CSSA by type of case and sex for 2018]

**Notes:**
(1) Figures as at end of each reference year. Figures in brackets refer to the percentages of male and female recipients of the type of case.
(2) CSSA is assessed on a household basis and cases are categorised according to the principal reason of receiving CSSA. As such, recipients under a specific category could not be entirely treated as having the same characteristics as indicated by the nature of the case. For example, some recipients under the old age category may be non-elderly members in the household.

**Source:** Social Welfare Department

The most significant gender difference in terms of the types of CSSA recipients was observed in “single parent” cases, where the number of female CSSA recipients was significantly greater than that of male.
7.3 Recipients of Social Security Allowance (SSA) by Sex

(a) Old Age Allowance, Old Age Living Allowance (OALA) and Guangdong Scheme

![Chart showing the number of recipients of Social Security Allowance by sex and year.](chart.png)

**Notes:**
1. Figures as at end of each reference year. Figures include persons whose cases are under processing and payments have not been made.
2. Old Age Living Allowance (OALA) was launched in April 2013. Eligible Old Age Allowance recipients and Disability Allowance recipients aged 65 or above were gradually converted to receive OALA payment with effect from April 2013. Higher OALA was launched in June 2018. Figures in 2018 include both Higher OALA and Normal OALA.
3. The Guangdong Scheme was launched in October 2013. Breakdown by sex was available with effect from June 2014.
4. Apart from Old Age Allowance, OALA and Guangdong Scheme, Fujian Scheme was launched in April 2018. As at end 2018, 732 females and 726 males were receiving Fujian Scheme.

**Source:** Social Welfare Department
The number of women receiving SSA was in general greater than that of men. The number of women and men receiving SSA were 513,412 and 432,994 respectively in 2018.
Violence and Crime

Women and men have different experiences in relation to crime. Generally speaking, there are fewer women arrested for crime than men. Among the newly reported spouse / cohabitant battering cases, there were much more female victims than male victims.
Among the newly reported spouse / cohabitant battering cases in the past decade, there were much more female victims than male victims.

Most of the victims of spouse / cohabitant battering cases were abused by their spouses. The number constituted 71.2% of all spouse / cohabitant battering cases.
8.2 Sexual Assault

8.2.1 Reported Rape Cases

The number of reported rape cases decreased in 2018 (1,098) compared with the figure in 2008 (1,406).

Source: Hong Kong Police Force

8.2.2 Reported Indecent Assault Cases by Sex of Victim

The number of reported rape and indecent assault cases concerning female victims decreased in 2018 (1,098) compared with the figure in 2008 (1,406).

Source: Hong Kong Police Force

The number of reported rape and indecent assault cases concerning female victims decreased in 2018 (1,098) compared with the figure in 2008 (1,406).
Although the number of females arrested for crime dropped in 2018 when compared to 2008, its proportion increased from 26.0% in 2008 to 28.1% in 2018.

International Comparison

The Gender Inequality Index (GII) is one of the six main Human Development Indices used by the United Nations. It measures the achievement of women in basic capabilities and the opportunities provided for women in economic and political arenas.
Gender Inequality Indices (GII) presents a composite measure of gender inequality using three dimensions: reproductive health, empowerment and the labour market. A low GII value indicates low inequality between women and men, and vice-versa. Hong Kong’s GII value in 2018 follows that of Republic of Korea and Singapore and is similar to that of Luxembourg who ranks at the sixteenth.

Notes: (1) Figures in square brackets refers to the international ranking.
(2) Hong Kong’s ranking in GII was absent since only parliamentary data of countries collected by the Inter-Parliamentary Union would be included in the calculation of GII. The index of Hong Kong was worked out by inserting the number of female Legislative Council members in Hong Kong in place of the number of female parliamentary members into the formula published in the technical notes of “Human Development Indices and Indicators 2018 Statistical Update” by the United Nations Development Programme.

Women’s Commission

The Women’s Commission was established by the HKSAR Government in January 2001 as a high-level central mechanism to promote the well-being and interests of women in Hong Kong.

Its mission is

“To enable women in Hong Kong to fully realise their due status, rights and opportunities in all aspects of life.”

To achieve this mission, the Women’s Commission has adopted a three-pronged strategy, namely the provision of an enabling environment, empowerment of women through capacity building, and public education.

For more information about the Women’s Commission, please visit our website: http://www.women.gov.hk or send us an email: women@lwb.gov.hk
